

Q&A

<p>Question 1</p>	<p>LOT 1 This is not a server that we can order from a vendor; it is a configuration of a computer or a graphical workstation. The motherboard points to the Asus ROG Maximus Z790 Formula. Additionally, (unless something new has been released that we are not yet aware of) 48 GB memory modules do not exist; they typically come in 8-16-32-64 GB options.</p> <p>All in all, this is not a server but rather a custom-built computer, and it will now be necessary to find all the components exactly as specified, which will not be easy. For instance, the motherboard is very expensive and is usually sold in packs of 10, and I'm not even sure if it can be obtained. Is there an alternative solution?</p> <p>So, the question is: are we talking about 2 servers, or 2 custom-built computers? Because as written, it seems to be the latter.</p> <p>Regarding the UPS, I believe that online models, especially those of this size, do not have Schuko plugs. We will double-check with the vendors, but we are fairly certain.</p>
<p>Answer 1</p>	<p>We are requesting two computers with specific components. In LOT 1, we are defining the system components, whereas in LOT 4 and LOT 5, we are specifying the graphics cards and power supplies for these computers, respectively.</p> <p>Together, LOT 1, 4, and 5 explain the full configuration of the computers.</p> <p>If you cannot build a configuration with the recommended components, please propose alternatives of a similar price range and performance.</p>
<p>Question 2</p>	<p>LOT 2 Is an operating system required here or not? This seems to resemble a Lenovo Yoga.</p>
<p>Answer 2</p>	<p>No operating system is needed. It is possible to propose any laptop that includes the recommended components or components that are similar in price and performance.</p>
<p>Question 3</p>	<p>LOT 3 This looks like an Asus; we will check.</p>
<p>Answer 3</p>	<p>You can propose any monitor that includes the recommended components or components similar in price and performance.</p>
<p>Question 4</p>	<p>LOT 4 Is this graphics card intended for the computers mentioned in the first item?</p>
<p>Answer 4</p>	<p>Yes, these are needed for the configuration in LOT 1.</p>
<p>Question 5</p>	<p>LOT 5 What are these power supplies for? Are they for the computers in the first item?</p>
<p>Answer 5</p>	<p>Yes, these are needed for the configuration in LOT 1.</p>
